Powered by Tally & Busy integration.

The Problem

10 million Indian SMEs run their books on Tally / Busy — and are stuck there.

- Tally / Busy were built in the 1990s — desktop-only, single-machine, no analytics layer
- Owners can't see live sales, stock, dispatch or salesman performance unless they sit at the office machine
- Field salesmen capture orders on paper / WhatsApp → 2–4 day data lag
- Dispatch & receivables are manual — papers move from desk to desk
- Hindi-English bilingual + low-bandwidth realities are ignored by most SaaS

Indian MSMEs contribute ~30% of GDP. Almost every one of them uses Tally ERP 9 / Tally Prime or Busy as their book of record — but those systems were never designed for the smartphone era. The result is a structural blind-spot: the owner knows what was in his books last Saturday, not what his salesman or godown did this morning.

The Opportunity

■ 15,000 Cr SME-software TAM in India by 2027.

- TAM — 10 M+ active SMEs on Tally / Busy across India
- SAM — 1.5 M SMEs with ≥ 3 employees and a smartphone-using owner
- SOM — 50 K early-adopter SMEs in Tier-2 & Tier-3 cities (Year 1 wedge)
- Tailwind — Digital India, ONDC, GST 3.0, Account Aggregator → SME digitization is now policy

We are NOT competing with Tally — we sit ON TOP of it. The Tally Sync Agent reads vouchers, stock, masters, ledgers via Tally's own ODBC / TDL XML protocol. Zero workflow change for the accountant. Owner gets the cloud + AI + mobile layer.

The Solution — FLOWRA Insights

One cloud layer that sees everything Tally / Busy sees — plus AI on top.

- Lightweight Windows agent reads Tally / Busy in real time (no manual export)
- Multi-company, multi-branch, multi-FY ready out of the box
- Mobile-first dashboards for the owner, salesman, dispatch & CA
- AI Insights powered by Gemini & GPT-5 — explains numbers in plain Hindi/English
- 100% Indian data residency — Mumbai region MongoDB Atlas

Plug-and-play: install agent → log in → 30-second sync of last 3 years of data. The agent auto-updates from our manifest. Every API endpoint enforces tenant isolation; no two customer's data can ever cross.

The Suite — 8 Integrated Modules

Each module ships value on day 1; together they replace 6–8 disjoint tools.

- 1. Sales & Receivables — live aging, top customers, collection nudges
- 2. Inventory & Stock — ABC, reorder, multi-group filters, PO generation
- 3. Salesman App — beat plans, daily check-ins, order & payment capture
- 4. Dispatch Terminal — Kanban board, LR / Bilty upload, porter assignment
- 5. CA Corner — TDS, GST, balance-sheet reconciliation, journal nudges
- 6. AI Insights — natural-language Q&A; on your own books
- 7. FLOWRA Tasks — task & workflow assignment across roles
- 8. FLOWRA Loyalty — built-in customer-rewards engine for SMEs

Modules share a unified data model — a sales voucher captured by the salesman flows instantly into Sales reports, Dispatch board, CA reconciliation and the Loyalty points ledger. One source of truth, eight surfaces.

Differentiators

Why not just build it in Tally / Excel / Zoho?

- Tally-native — no double-entry, no CSV imports, no workflow change
- Bilingual UI — English + Hindi, Tier-2/Tier-3 ready
- Multi-tenant SaaS — full data isolation, GST-compliant audit trail
- AI layer — GPT-5 + Gemini, explains receivables / inventory in plain language
- FLOWRA Tasks & Loyalty — value-adds Tally / Zoho simply don't have
- Made-in-India price points — fraction of Salesforce / Zoho One

Competitors fall into 3 camps: (a) Tally add-ons that still need a desktop; (b) global SaaS like Zoho / Salesforce that ignore Tally; (c) standalone ERPs that demand migration. FLOWRA sits in the white-space — Tally-native, cloud-mobile, AI-aware, and priced for India.

FLOWRA Tasks — Roles, Reminders, Accountability

A built-in operations layer for the owner and the team.

- Assign tasks to salesman, dispatch, CA, or any employee — by name or by role
- Recurring tasks (weekly stock count, monthly GSTR, daily bank reco)
- Tally-data-aware triggers — auto-create a task when receivables cross a threshold
- Mobile push + WhatsApp reminders (roadmap)
- Full audit trail — who did what, when, with proof attachment

Tasks isn't a generic to-do list. Every task can be linked to a Tally voucher, customer, or item — so closing a task automatically updates the relevant FLOWRA report. Think Asana, but it actually knows your books.

FLOWRA Loyalty — Reward Programs, Built-In

Turn one-time buyers into repeat customers without a separate tool.

- Points engine — auto-credit on every Tally sales voucher
- Tiers — Silver / Gold / Platinum with tenant-defined rules
- Redemption — discount coupon or cash-back against next invoice
- Customer-facing WhatsApp / SMS / email card (roadmap)
- Owner dashboard — top loyal customers, churn-risk customers, lifetime value

Indian SMEs lose ~25-30% of their customer base every year because they have no structured retention play. FLOWRA Loyalty fixes that — without forcing the owner to subscribe to a separate platform like LoyaltyXpert, Capillary or Easyrewardz.

How It Works

5 steps from sign-up to first AI insight — under 10 minutes.

- 1. Owner signs up at flowralive.in (free 7-day trial)
- 2. Downloads the FLOWRA Tally Sync Agent (10 MB Windows .exe)
- 3. Agent reads Tally vouchers + masters in real time via official TDL
- 4. Data lands in encrypted Mumbai-region MongoDB Atlas (multi-tenant)
- 5. Dashboards + AI Insights + mobile apps light up instantly

The Sync Agent is the moat. It auto-discovers companies, handles Tally Prime 7.0's new AlterID protocol, supports multi-FY, and auto-updates itself from a signed manifest. Customers don't touch their accountant's setup.

Where We Are

Live with pilot customers — feedback-driven product.

- Pilot customers across automobile, electrical, textile & lubricant verticals
- 100K+ Tally vouchers processed in pilots
- v9.8.28 desktop agent — Tally Prime 7.0 compatible, hot-update channel live
- 111 product iterations shipped; 101/101 automated tests green
- Bilingual marketing posters + landing page ready (flowralive.in)

We deliberately picked pilot customers across 4 verticals to harden multi-tenant, multi-company and bilingual edge cases before scale-up. Their daily feedback drives the public roadmap on the website.

Business Model

Subscription SaaS · per company · per user · annual upfront.

- Tiered subscription: Starter / Growth / Enterprise
- Per-additional-user pricing for salesman & dispatch logins
- Add-on revenue: WhatsApp credits, AI Calling minutes, GST filing assistance
- Pricing — currently pilot test going on; commercial rollout post-pilot
- Sticky integration → low expected churn once a tenant onboards

Once a tenant maps its Tally companies, customers, salesmen and loyalty rules into FLOWRA, the cost of switching to another tool is high. We expect <5% annual churn based on comparable Indian SaaS benchmarks (Vyapar, RazorpayX Payroll).

Go-to-Market

Three concentric circles — CA → Tally Partner → SME owner.

- 1. Partner-led — Chartered Accountants + Tally Partners channel (revenue share)
- 2. Self-serve — Hindi/English landing page, 7-day free trial, no credit card
- 3. Community-led — Tier-2/3 owner communities, WhatsApp groups, local conclaves
- 4. Content — bilingual demo videos, GST/TDS explainers, AI-insight walkthroughs
- 5. Referral engine — built-in referral codes for existing users (live in product)

Indian SMEs trust their CA more than any marketer. We turn the CA into FLOWRA's first champion — they get a Corner of their own (CA Corner module), and a revenue share when their clients subscribe.

Tech Stack

Modern, multi-tenant, India-first.

- Frontend — React 19 + Tailwind, mobile-first, bilingual
- Backend — Python FastAPI, async, hot-reload, modular routes
- DB — MongoDB Atlas (Mumbai region) with full tenant isolation
- Desktop Agent — Windows Python + PyInstaller, signed .exe, auto-update
- AI — Gemini 3 + GPT-5 + nano-banana via Emergent integrations
- Hosting — DigitalOcean droplet, Nginx + Supervisor, encrypted at rest

We chose Python + React + MongoDB so a small founding team can ship daily. Multi-tenant isolation is enforced at every query; no application code can ever leak data across tenants. All secrets are in environment variables, not in code.

The Team

Small, founder-led, ship-every-day culture.

- Ankit Sarawgi — Founder, Product & Strategy
- Punit — Engineering & Tally protocol
- Kritika — UX, Brand & Customer Success
- Headquartered in Raipur, Chhattisgarh, India
- AI-augmented engineering — daily build, daily test, daily ship

Our biggest moat is operational velocity — we ship and verify against live customer Tally data every week. A larger competitor would take a quarter to do what we ship in a sprint.

12-Month Roadmap

From pilot to 500+ paying SMEs.

- Q1 — WhatsApp automation (AiSensy / Meta Cloud) + AI Calling bot for recovery
- Q2 — GST Portal integration + FLOWRA Loyalty v1 GA + Google Drive document store
- Q3 — Hindi UI complete + ONDC connector + Open Account-Aggregator pull
- Q4 — Iframe / API for ERP partners + India-first AI co-pilot
- Always-on — daily product polish driven by pilot customer feedback

Every roadmap item is already spec'ed and prioritised in our PRD.md (versioned in repo). We do not run on guesswork — every quarter's deliverables are visible to pilot customers.

Thank You

Let's build the operating system for Indian SMEs together.

FLOWRA Insights — Project Write-up

For submission at Manthan X Founders

Project Title

FLOWRA Insights — An AI-first cloud operating system for Indian micro, small and medium enterprises running Tally / Busy ERP.

Promoter & Company

Jodidar India, head-quartered in Raipur, Chhattisgarh, India. Founder: **Ankit Sarawgi**. Core team: Punit · Kritika. The company is a founder-led, bootstrapped product venture building software for the unserved long-tail of Indian SMEs.

Problem Statement

Over ten million Indian SMEs run their day-to-day accounting on Tally ERP 9, Tally Prime, or Busy. These tools, while excellent for compliance, are essentially single-machine desktop systems built in the 1990s. They do not expose live data to the smartphone, do not offer analytics, and cannot natively serve the field salesman, the warehouse, the chartered accountant or the customer. The result is delayed decisions, paper-based operations, and a structural drag on SME productivity.

Proposed Solution

FLOWRA Insights is a lightweight cloud SaaS that sits on top of Tally / Busy without disturbing the accountant's existing workflow. A small Windows agent reads Tally vouchers, stock and masters in real time via the official TDL/ODBC protocol and pushes them to a multi-tenant cloud where the owner, salesman, dispatch, and CA each have a purpose-built mobile-first dashboard. An AI layer powered by Gemini 3 and GPT-5 turns raw numbers into plain-language insights and recommendations.

Product Modules

The suite ships eight integrated modules — Sales & Receivables, Inventory & Stock, Salesman App with Beat Run, Dispatch Terminal Kanban, CA Corner, AI Insights, **FLOWRA Tasks** (task & workflow assignment with Tally-data-aware triggers), and **FLOWRA Loyalty** (a built-in points / tier customer-rewards engine for SMEs). Every module shares a unified tenant-isolated data model, so a sales voucher flows instantly into reports, dispatch, CA reconciliation and loyalty points.

Differentiation

Most Indian SaaS competitors either (a) sit inside Tally as desktop add-ons, (b) ignore Tally and demand migration, or (c) target only specific functions like invoicing. FLOWRA is the only product that is Tally-native, cloud-mobile, AI-aware, bilingual, and priced for Tier-2 / Tier-3 SMEs all at once.

Market Opportunity

The Indian SME-software TAM is projected at ~₹15,000 crore by 2027. Within this, the addressable market for cloud + AI overlays on existing Tally / Busy installations is ~₹3,500 crore, driven by Digital India, ONDC adoption, GST 3.0 and the Account Aggregator framework. Our serviceable obtainable market in Year 1 is 50,000 early-adopter SMEs in Tier-2 / Tier-3 cities, where founder Ankit Sarawgi has strong network advantages.

Business Model

Subscription SaaS — billed per company per user, annual upfront. Tiered packaging (Starter / Growth / Enterprise) with add-on revenue from WhatsApp messaging credits, AI calling minutes and GST filing assistance. Pricing is currently in **pilot test** with feedback from live customers; commercial rollout is planned at the end of the pilot phase.

Go-to-Market

Three concentric circles: (i) Chartered Accountants and Tally Partners as channel partners with revenue share — the CA Corner module gives them a daily reason to recommend FLOWRA to their clients; (ii) self-serve via a bilingual landing page with 7-day free trial and no credit card; (iii) community-led growth through Tier-2 / Tier-3 SME WhatsApp groups and local startup conclaves such as Manthan X Founders.

Technology

React 19 + Tailwind frontend, FastAPI (Python 3.11) backend, MongoDB Atlas in the Mumbai region, Python Windows desktop agent (signed .exe, auto-updating). AI is delivered via Emergent integrations with Gemini 3, GPT-5 and nano-banana image generation. All secrets live in environment

variables; every endpoint enforces tenant isolation at the query layer.

Team

Ankit Sarawgi (Founder — product, strategy, customer development). Punit (Engineering — Tally protocol, agent, backend). Kritika (UX, brand, customer success). The team operates on a daily-build / daily-ship cadence with AI-augmented engineering.

Traction

111 product iterations shipped to date. 101 of 101 automated tests green across the test suite. Live pilots across automobile, electrical, textile and lubricant verticals. 100,000+ Tally vouchers processed in pilot data. v9.8.28 of the desktop agent in production, with hot-update channel and Tally Prime 7.0 compatibility.

Roadmap (Next 12 Months)

Q1 — WhatsApp Automation and AI Calling Bot for receivables recovery. Q2 — GST Portal integration, FLOWRA Loyalty v1 GA, Google Drive document storage. Q3 — Hindi-complete UI, ONDC connector, Account Aggregator pull. Q4 — Partner API / iframe, India-first AI co-pilot. Always-on: daily product polish driven by pilot customer feedback.

Risks & Mitigations

(a) Tally protocol drift — mitigated by the modular, hot-updatable agent and a comprehensive integration test suite. (b) Multi-tenant data leak — mitigated by query-layer enforcement and a 100% green tenant-isolation test pack. (c) Adoption inertia — mitigated by zero-workflow-change installation, 7-day free trial and CA-partner-led pull.

Ask

We are pitching at the **Manthan X Founders** conclave to invite mentorship, partnerships, and the wider grant / investor ecosystem to join us in building the operating system for Indian SMEs.
