

ADMIN / IT SETUP

FLOWRA Insights — Deployment Guide

Step-by-step setup for IT admins and accountants. Get your Tally or Busy connected to FLOWRA in under 30 minutes.

1. Decide the Sync Source

FLOWRA supports two accounting systems. You'll install ONE of these on the same Windows machine where Tally / Busy runs.

Tally Sync Agent v9

For Tally Prime (Release 2 and above). Reads via Tally's HTTP/XML port (default 9000). No file access required — Tally must be running.

Busy Sync Agent v1

For Busy Accounting (Busy 21+). Reads `.bds`` files (MS Access / Jet 4.0) directly. Busy can be running or closed. Requires the Microsoft Access Database Engine 64-bit redistributable.

2. Pre-requisites

- A Windows 10 / 11 PC where Tally or Busy lives. Admin rights to install Python.
- Stable internet connection (the agent uploads in 500-record chunks; can pause/resume on flaky links).
- Your FLOWRA admin login (the email/password used to register at insights.flowralive.in).
- For Tally: TallyPrime configured to allow API access (Gateway → F1 Help → Settings → Connectivity → Client/Server → Action: Both, Port: 9000).
- For Busy: Microsoft Access Database Engine 2016 64-bit redistributable installed (free download from Microsoft).

3. Install the Agent

Each agent ships as a single Python file. A one-click `.exe`` installer is on our roadmap (Q2 2026).

- Install Python 3.9+ from python.org (tick 'Add to PATH' during install).
- For Tally: `pip install requests pywin32`
- For Busy: `pip install pyodbc requests cryptography`

- Download the agent file from your FLOWRA admin → Setup → Download Agent.
- Double-click the agent file. The light-themed GUI opens.
- Enter Server URL (<https://insights.flowralive.in>), your username, and password.
- For Busy: click Browse and select your Busy data folder (the one containing `db.bds` and `db{year}.bds`).
- Pick a company from the list, pick the FY, click Full Sync. First sync may take 5–20 minutes depending on data volume.

4. Multi-Company Setup

Repeat the Full Sync step for each company in your accounting software. FLOWRA auto-discovers the companies and creates a UUID mapping per company. Plan limits: Starter = 1 company, Professional = 3, Enterprise = unlimited.

5. Setting up Roles

Admin	Full access. The first signup automatically becomes the admin. Configure features for employees in Profile → Employees.
Employee	Restricted access — admin chooses which menus they see. Cannot change tenant settings.
Salesman	A specialised employee role. Created in Profile → Employees with role 'salesman'. Maps customers via Salesman → Manage.
Dispatch	Restricted to Dispatch Terminal only. Cannot see CRM or financials. For warehouse-floor users.
Super Admin	FLOWRA platform team only. Manages cross-tenant operations, plan changes, billing.

6. Sync Schedule

The agent runs two cycles automatically once started:

- Quick Sales Sync — every 5 minutes (sales vouchers only, fast)
- Full Sync — every 20 minutes (all data types: sales, receipts, journals, customers, inventory, ledgers, P&L;)
- Manual Resync — triggerable from FLOWRA web UI; agent picks it up within seconds

7. Security Considerations

- All agent ↔ FLOWRA communication is HTTPS (TLS 1.3)
- HMAC-signed sync tokens prevent stolen-credential replay attacks
- Subscription expiry gates sync — expired tenants get a clear error
- Local agent config stored on the Windows machine (no plain-text credentials)
- FLOWRA never accesses your Tally / Busy directly — the agent always pushes; nothing pulls

8. Troubleshooting

Tally agent: 'Cannot connect to Tally'	Tally must be running and Action set to Both in Connectivity Settings. Check port 9000 isn't blocked by firewall.
Busy agent: pyodbc error	Install Microsoft Access Database Engine 2016 64-bit (matches Python's bit-ness).
Sync silently stops	Check Sync History page in the web UI. Most common cause: subscription expired or password changed since agent was started.
Wrong company appears	Multi-company mapping issue — go to Setup → Reset Company Mapping (admin only) and re-sync.
Outstanding doesn't match Tally	Toggle the Branch filter in CRM. Branch ledgers can double-count if not excluded.

9. Backups & Data Portability

FLOWRA runs Tier-1 backups on the host pod and gives every tenant a self-service data export.

- Daily automated MongoDB dump at 02:00 IST — last 30 backups retained, gzipped archives
- SuperAdmin → Backups tab: Run Now, list, download, delete on demand
- Tier-2 (MongoDB Atlas point-in-time recovery, region: Mumbai) is the next migration step — see DATABASE_STRATEGY.md
- Tenant Admin → user menu → Export Your Data: ZIP with one JSON per collection + manifest (DPDP Act 2023 right-to-portability)
- Strict tenant isolation enforced server-side — your data is never mixed with another tenant's; password hashes and system audit logs are never included in your export
- Every export and backup logged to the audit trail for compliance

10. Going to Production

- Set the agent to Auto-Start with Windows (right-click → Run on startup)
- Subscribe to FLOWRA Status (status.flowralive.in) for sync health alerts
- Enable WhatsApp digest in Profile to receive a daily sync-health summary

- Add 'Sync Failed' email alert in Notifications → Email triggers (Resend integration required)

Need help with deployment?

Book a free 30-minute video call with our deployment manager: **hello@flowralive.in**. We'll set up your agent, do the first sync together, and stay on the call until everything works.
