

END-USER TRAINING

FLOWRA Insights — Training Booklet

A short, screen-by-screen guide for the people who will use FLOWRA every day. Read once, refer back when needed.

1. Logging In

Open <https://insights.flowralive.in>. Use the email and password sent by your admin. On first login, an interactive tour walks you through every menu. You can replay it anytime from the user menu (top right) → Replay Tour.

2. The Navbar

Top of every page. From left: FLOWRA logo, current company switcher (click to change companies if you have access to more than one), the menu items your plan unlocks, financial-year selector, branch toggle, sync status indicator (green = connected), and your profile menu.

3. Dashboard

Your business at a glance — Total Sales (all FYs), Inventory Items, Low Stock count, FY Sales Value, Overdue Payments banner, Recent Transactions, and Top Customers. Click any number to drill in.

4. Sales

Every sales voucher synced from Tally / Busy. Filters: date range, customer, salesman, FY. Click a row to see line items. Export the filtered list as Excel.

5. CRM

Customer Outstanding tab: ageing buckets (0–30, 31–60, 61–90, 90+), branch toggle (include/exclude branch transfers), search by name. Targets tab: set monthly targets per customer. Follow-ups tab: add notes with reminders.

6. Inventory

All stock items with quantity, value, and Sale Price (Tally STDPRICE master). Auto-Reorder: click the button to set smart reorder levels based on the last 2 months' sales velocity. Low-stock items are highlighted in red. ****A/B/C/D categorisation**** — click any pill in the row to tag a single item, or click 'Auto-ABC' to apply Pareto 80-15-4-1 across the whole catalog. Filter the table by tier from the dropdown.

7. Analytics

Inventory movement (slow / fast movers), Below-cost sales, Sales frequency, Customer-item matrix, SPIP, and the new **Category Sales** tab — pick A/B/C/D and drill into each item's top customers, frequency, and current stock. CSV export per category.

8. Salesman Orders (if your plan includes it)

Salesmen log in on their phone, see only their mapped customers and live stock, place an order, and submit. Admins approve / reject / hold from the Salesman Orders → Approval Queue. Approved orders appear on the Dispatch Terminal automatically. Salesmen also get a personal **Dashboard** with Achieved / Expected YTD / Monthly Target / Achievement %, plus customer-wise drill-down.

8a. Beat Run Today (Salesman)

Auto-derived from your beat plan filtered by today's day-of-week. Tap a customer to mark visited (IST timestamp). Add unplanned visits in the NEW box — they're tagged NEW until the customer appears in synced Tally data. **Beat History** is read-only — past dates are locked, click any row for the detail view. Admins audit any salesman's runs from useradmin Salesman → Beat Runs.

9. Dispatch Terminal (if your plan includes it)

Kanban board with swim-lanes: Pending → Packed → Loaded → Out → Delivered. Drag cards across lanes as they progress. Each card has: customer, items, transporter, LR number, document uploads. End-of-day: click 'Close of Day' for a PDF summary you can share on WhatsApp. Dispatch employees see the SAME admin view — only the Employees tab is hidden.

10. CA Corner

Cash Flow: 3-section indirect method (Operating, Investing, Financing). P&L: monthly + annual; click any ledger to drill into transactions — **matches Tally exactly to the rupee**. Balance Sheet: Assets vs Liabilities + Capital, expandable, auto-balanced via P&L; A/c residual. AI Expense Insights: ask GPT-5.2 to find your largest cost-saving opportunities.

11. AI Reports & Insider Result

Both use GPT-5.2 to write narrative reports in plain English. AI Reports gives you long-form analysis on demand; Insider Result surfaces the most pressing patterns as quick cards.

12. Sync History

Timeline of every sync from your desktop agent. Each row shows date/time, FY, items synced, and which agent ran it (blue 'Tally vX' or amber 'Busy vX').

13. Setup

First-time setup: download the Tally or Busy desktop agent, log in inside the agent with your FLOWRA credentials, point it at your Tally/Busy data folder, click Full Sync. Repeat for each company. **Re-run**

Full Sync after upgrading to Tally agent v9.6.0** to capture STANDARDPRICE for every stock item.

14. Profile & User Menu (top-right)

Profile & Security: change password, manage employees, manage salesmen. **Export Your Data**: download a ZIP of every record FLOWRA stores for your tenant (DPDP Act 2023 right-to-portability — manifest + one JSON per collection). Replay Tour: re-watch the onboarding tour. Switch Company: jump between synced companies. Logout.

15. Mobile Use

FLOWRA is fully responsive — Dashboard, Sales, CRM, Salesman Orders and Dispatch all work on phones. The full menu collapses into a hamburger button (top-left). Salesmen are expected to work mainly on phones.

Need help?

Email hello@flowralive.in with your tenant ID (visible in Profile). Our team responds within 1 business day. For urgent issues during dispatch hours, your account manager will share a WhatsApp number after onboarding.
