

# What's New in FLOWRA

Everything shipped between April 2026 and July 2026, grouped newest first.

|            |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-09-27 | NEW | <b>Salesman screens now show Product Category + ABC pill</b><br>Admin's Salesman → Item-wise Sales table and every New-Order row (Repeat, Suggestions, Browse Catalog) now surface Busy's product category alongside the A/B/C/D pill exactly as it appears on the Inventory tab. Backend enrichment on <code>`/salesman-orders/catalog`</code> , <code>`_build_inventory_lookup`</code> , <code>`/salesman-orders/my-stats`</code> , <code>`/salesman/performance-detailed`</code> . Catalog dedupes per-FY snapshots so a SKU never renders twice with contradictory stock qty. Catalog limit raised 2000 → 20000 so large books aren't alphabetically truncated.                                                                                                                   |
| 2026-09-27 | FIX | <b>Busy Agent v1.6.1 — Stock-Group Name Resolution</b><br>Master1 rows returned <code>`Code`</code> as an int on licensed Busy 21, so downstream <code>`str(code)`</code> lookups missed every stock-group name — Inventory + Salesman screens showed <code>`Code:23134`</code> in the Category column. v1.6.1 normalises the key to string on insert. Rebuild <code>`.exe`</code> via <code>`build.bat`</code> to distribute; once salesmen re-sync, all category chips light up with real names.                                                                                                                                                                                                                                                                                    |
| 2026-09-27 | FIX | <b>Busy CRM — Customer Group-Hierarchy Fix (BSA class of bug)</b><br>Books nesting debtors under user-created sub-groups (e.g. 'SUNDRY DEBTORS - JBP') were losing every party at sync time — only debtors directly under Busy's built-in root (code 116) landed in Mongo. Two-layer fix: (a) Busy Agent v1.6.0 walks the ParentGrp chain until it hits a built-in root, cycle-safe; (b) server-side safety-net synthesizes customer rows from sale-party names when the synced list is suspiciously small (< 20% of distinct sale parties). CRM Outstanding + Payment Behavior + Salesman → Map Customers dropdown all recover automatically — no agent rebuild strictly required for the UI to light back up. Rebuilding v1.6.0 later restores full address/GST/contact enrichment. |
| 2026-09-27 | FIX | <b>Busy Inventory &amp; Value Doubling — Root Cause</b><br>Every recurring Busy mismatch (Dashboard, Inventory list, Movement Analysis, PDF export, CA Corner) traced to one bug: iter-158's dedupe was SUMMING closing quantities across per-FY snapshots. Busy re-syncs the same physical SKU into every FY database file — an item with 5 kg on 31-Mar-26 and 10 kg on 11-Sep-26 became 15 kg. Fix: dedupe now picks the row for the requested FY (or latest FY if no filter). Expected on BSA production: 1143 items / ₹1.11 Cr → ~659 items / ~₹50 L (matches Busy Stock Status CSV exactly).                                                                                                                                                                                    |

|            |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-08-16 | NEW     | <b>Inventory Demand Forecast — Analytics tab</b><br>New admin-only tab with a KPI band, consolidated buy list, month × SKU heatmap, top-customer cohort projections, and CSV export. Per-SKU model auto-selects between Holt-Winters (A-class steady sellers), SES (B-class), Croston + SBA (C-class intermittent) and cohort median (new SKUs). Confidence bands, reorder-point + safety-stock, optional festival/monsoon lens and what-if growth-% slider. Uses ALL synced FYs — analysed 13,696 NAV SKUs in ~8 seconds. |
| 2026-08-16 | IMPROVE | <b>Setup Page — Per-Agent Release Manifest</b><br>Busy tenants now see the correct Busy Sync Agent version chip (v1.5.7) and download link. Tally tenants stay on v9.8.28. Backend routes each tenant to its own release manifest via <code>?source=busy tally`</code> . Removed the ODBC/OLE-DB technical blurbs from customer-facing text.                                                                                                                                                                               |
| 2026-08-16 | IMPROVE | <b>ERP Label Dynamic Everywhere</b><br>The 'Set in Tally' / 'Tally ✓' / 'from Tally*' labels now dynamically read 'Tally' or 'Busy' based on the caller's cached agent source. Dashboard, Inventory, CRM, Sync History, Setup — all switch together.                                                                                                                                                                                                                                                                       |
| 2026-08-16 | FIX     | <b>Dashboard Inventory Count — 10K → Real Count</b><br>Dashboard inventory tile was capped at 10,000 by a <code>`to_list(10000)`</code> truncation. Swapped to <code>`count_documents()`</code> — exact count, faster, matches the Inventory menu.                                                                                                                                                                                                                                                                         |
| 2026-08-16 | FIX     | <b>Customer Lifecycle — 'All Lost' Bug</b><br>Busy voucher_date carries a time suffix ( <code>`2025-04-01 00:00:00`</code> ) which broke the lifecycle date parser and bucketed every customer as LOST. Fixed by normalising to the first 10 chars.                                                                                                                                                                                                                                                                        |
| 2026-08-16 | FIX     | <b>SPIP Analysis Count Consistency</b><br>SPIP was inflating the SKU total by union-ing sales-voucher item keys with inventory master. Now analyses ONLY the tenant's inventory master — count matches the Inventory menu exactly.                                                                                                                                                                                                                                                                                         |
| 2026-08-16 | FIX     | <b>Cross-Tenant Excel Export Leak Sealed</b><br><code>`/api/analytics/sales-frequency/export`</code> was running an empty query — any authenticated caller would download every tenant's sales as XLSX. Scoped to the caller's tenant + company via <code>`get_tenant_context`</code> .                                                                                                                                                                                                                                    |

|            |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-08-16 | NEW     | <b>Busy Sync Agent v1.5.7 — Correct Invoice Line Math</b><br>Sales-voucher line `amount` now = qty × rate (was reading D6 which turned out to be a duplicate of rate, so `avg sale price` analytics collapsed to 1/qty of reality). `discount` derived from MRP – rate. External customer PO/reference read from Tran1.RefNoAlpha separately from the printed VchNo. Every voucher, inventory, customer and creditor row now carries an `fy` tag so CA-Corner FY selectors work. |
| 2026-08-16 | NEW     | <b>Busy Sync Agent v1.5.6 — Data Parity</b><br>Inventory `delete_many`-per-chunk backend bug fixed (was wiping ~24K items down to 182 on every sync). P&L; + all ledgers keys expanded to include FY so both FYs coexist. `net_profit_loss` emitted correctly. `opening_quantity/rate/value` sourced from Folio1. Sale/cost price fallback ladder for SKUs without transactions.                                                                                                 |
| 2026-08-16 | IMPROVE | <b>Busy Sync Agent v1.5.5 — Reader Pool</b><br>Each `.bds` file now opens once per sync tick instead of ~14 times. Cuts full-sync CPU roughly in half on large NAV-sized databases and eliminates the AccessParser reopen jank in logs.                                                                                                                                                                                                                                          |
| 2026-08-16 | NEW     | <b>Busy Sync Agent v1.5.4 — Real Company Name + Retry</b><br>Extracts the actual company display name (e.g. `NAVDURGA AUTO SPARES JABALPUR`) from Busy master DB instead of falling back to the folder id `COMP0002`. Folder-keyed FLOWRA mapping auto-migrates legacy rows in-place. 3-tier retry backoff (5s/30s/60s) on 502/503/404 with loud `[SYNC-LOST]` dead-letter logs — no more silent data drops on network hiccups.                                                  |
| 2026-08-14 | FIX     | <b>Busy Sync Agent v1.5.3 — Real VchType Mapping</b><br>Licensed Busy 21 uses different voucher-type numbers than Busy Demo. Fixed: Purchase=2, Receipt=14, Payment=16 (new category), Contra=19, Journal=4, Debit Note=12, Credit Note=10 (folds Rate-Diff 17 and Discount 18), Sundry Journal=3 (new category). Previously purchase/contra/journal/debit-note came in as zero — now shows all 467 purchases, 568 contras, 431 payments, 1,446 receipts and more.               |
| 2026-08-14 | NEW     | <b>Busy Sync Agent v1.5.2 — Multi-FY + Real Schema Fix</b><br>Daemon now syncs ALL FYs from the selected start_FY onwards on every tick. Sales invoices carry real item names, quantities, GST %, MRP, discounts, warehouse and the Google Drive PDF link Busy stores. Inventory shows human-readable names, HSN, cost + sale price.                                                                                                                                             |

|            |         |                                                                                                                                                                                                                                                                                                                    |
|------------|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-08-13 | FIX     | <b>Busy Sync Agent v1.5.1 — Licensed Busy 21 Fully Supported</b><br>Root-cause fix for the '-1905 Not a valid password' + 'Temporary Ace DSN' errors on licensed Busy 21. Added a pure-Python JET4 reader that bypasses the Windows Access driver entirely — zero password prompts, zero registry writes.          |
| 2026-07-13 | NEW     | <b>Busy Sync Agent v1.5.0 — Enriched Customer Sync</b><br>Direct-ODBC extract now pulls party group hierarchy, WhatsApp-normalized mobile, email, GST/PAN, split address, station, city, state, price category, salesman link and closing balance. 100% our own — no dependency on any third-party Busy connector. |
| 2026-07-12 | FIX     | <b>CA Corner — Bank &amp; Investor Reports False 'No FY data' Error</b><br>Preview now correctly detects every FY present in Tally sales_vouchers (derived from voucher_date range instead of a non-existent scalar 'fy' field). Historicals also pull real per-FY sales/purchases via total_amount.               |
| 2026-07-12 | IMPROVE | <b>Analytics — Sales Frequency Readability</b><br>Increased row height and padding on the Sales Frequency table so item names, top customers and totals no longer feel cramped.                                                                                                                                    |
| 2026-07-11 | FIX     | <b>Busy Sync Agent v1.3.1</b><br>pyodbc bundled + Busy DB password fallback chain (Busy 21/18/older) + BUSY_DB_PASSWORD override field in Settings.                                                                                                                                                                |
| 2026-07-08 | FIX     | <b>Tally Agent v9.8.30 — Forward-Dated Voucher Fix</b><br>Quick-sync window now extends to today, not stops at stored LVD. Reconcile is date-scoped — prevents mass deletions when a voucher is added with a future date.                                                                                          |
| 2026-07-08 | NEW     | <b>Busy Sync Agent v1.2 — Full Tally Parity</b><br>Complete 1:1 Tally clone GUI: 4 connectivity cards, Sync Status panel, Subscription block with Request Renewal, auto-detect companies + FYs on folder pick.                                                                                                     |
| 2026-07-08 | NEW     | <b>Investor Pitch Kit</b><br>16-page pitch PDF + 10-page cold-email teaser + editable Excel projection model. Auto-generated from a single source of truth.                                                                                                                                                        |

|            |     |                                                                                                                                                                               |
|------------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-07-05 | NEW | <b>Tally Agent v9.8.29 — LVD &amp; AlterID Persist</b><br>Per-company LVD + AlterID + timestamp saved to disk. 7-day full-sync skip window if AlterID unchanged.              |
| 2026-07-02 | NEW | <b>Marketing Kit</b><br>Auto-generated pitch decks (detailed + pointers), print-ready visiting cards (front/back QR), Tally-vs-Busy-vs-FLOWRA comparison charts.              |
| 2026-06-30 | FIX | <b>Inventory Export Bugs</b><br>CSV/Excel list→string coercion, PDF payload updates, multi-group filter fix. All export formats now handle nested product data correctly.     |
| 2026-06-25 | NEW | <b>Beat Run — Mandatory Order/Payment + Close Day</b><br>Yes/No flags on every stop. Unplanned existing-customer dropdown. End-of-Day PDF & Excel with breakdown by salesman. |
| 2026-06-20 | NEW | <b>Salesman Copy-From</b><br>One-click copy of another salesman's customer mapping + beat plan. Speeds up new-hire onboarding by ~90%.                                        |
| 2026-06-15 | NEW | <b>Employee Active/Deactivate Toggle</b><br>Deactivate a user without deleting audit history. Deactivated users lose login but their data + reports remain intact.            |
| 2026-06-01 | NEW | <b>Tally Agent v9.8.28 — SVCcurrentCompany Fix</b><br>Fixed XML header format that some Tally builds rejected. Zero errors on 5,000+ voucher syncs after fix.                 |
| 2026-05-10 | NEW | <b>Cancel Dispatch Cards</b><br>Cancel a card up to the Packed lane with a reason; cancelled cards strikethrough until end-of-day, then auto-archive.                         |
| 2026-05-10 | NEW | <b>Tally Invoice Drift Detection</b><br>Cards now auto-flag (amber/red badge) when the source Tally invoice is modified or deleted after sync — no silent drift.              |
| 2026-05-09 | NEW | <b>Fuzzy Search Everywhere</b><br>"tvs 10" now finds "TVS-10", "TVS(10)", "TVS/10". Spaces and separators (- / ( ) ! : . , & _) ignored across all search boxes.              |

|            |         |                                                                                                                                                                       |
|------------|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2026-05-08 | IMPROVE | <b>SPIP — 12-Month Rolling Window</b><br>Added rolling 12-month fallback and a "No Movement" bucket for idle items. Aliases included in global search.                |
| 2026-05-07 | FIX     | <b>SPIP &amp; YoY Limits Removed</b><br>Lifted the 5,000-row cap so all items surface in SPIP. Cross-FY YoY sales comparison + forecast tables added.                 |
| 2026-05-05 | IMPROVE | <b>Mobile Performance</b><br>Server-side pagination + render caps for Inventory and Customer CRM. Tally API delay 2s → 0.5s. New compound DB indexes.                 |
| 2026-05-03 | NEW     | <b>Tally Agent v9.8.7</b><br>Standard price via STANDARDPRICELIST, root-group hierarchy, and item alias (LANGUAGE_NAME) extraction.                                   |
| 2026-05-01 | FIX     | <b>CA Corner BS &amp; P&amp;L; Parity</b><br>Fixed Assets, Sundry Debtors and Creditors re-mapped via root-group hierarchy. Removed double-counting of Stock-in-Hand. |
| 2026-04-28 | NEW     | <b>Beat Run Monthly Report</b><br>Salesman beat coverage and visit summary, exportable to Excel.                                                                      |
| 2026-04-23 | NEW     | <b>Dispatch Terminal</b><br>Kanban board, LR tracking, document uploads, porter settlement.                                                                           |
| 2026-04-16 | FIX     | <b>Outstanding Calculation Fixed</b><br>Opening balances per FY and journal voucher party amounts corrected.                                                          |
| 2026-04-10 | NEW     | <b>Desktop Agent v9</b><br>Deletion reconciliation, command queue, dual-schedule syncing.                                                                             |
| 2026-04-08 | NEW     | <b>CRM Targets Overhaul</b><br>Bulk targets, customer removal/reactivation, read-only past FYs.                                                                       |
| 2026-04-05 | NEW     | <b>Digital Questionnaire</b><br>Public customer forms with SuperAdmin leads and Excel export.                                                                         |
