Executive Summary

The AI operating system for India's 3 million Tally & Busy SMEs.

FLOWRA turns dead accounting data trapped in Tally / Busy desktop software into a live, mobile, AI-powered command centre. We already have one paying enterprise customer (Krishna Sales Corp) and a working desktop-agent + web SaaS stack — hosted on MongoDB Atlas, FastAPI and React.

The 60-second pitch

- 3M Indian SMEs run Tally or Busy — they have no cloud, no mobile, no analytics, no AI. Migration off Tally is a non-starter. We bolt onto it.
- Our desktop sync agent (Tally & Busy, both shipped) pushes data to the cloud every 5 min — read-only, forward-dated safe, audit-scoped reconcile (v9.8.30). 82% gross margin.
- Paying customer pricing: Starter ₹833 / Professional ₹2,083 / Enterprise ₹3,166 per company / month.
- Path to **₹5 Cr ARR by FY30-31** with 2,000 paying customers on a 25-person team → EBITDA-positive by Y5, cash-flow-positive by Y6.
- Raising **₹2.5 Cr Seed today** for a 24-month runway (product + first 100 customers), then **₹6.0 Cr Series A** at Month 24.

₹20,195	7.9×	5.1	82%
Blended ARPU / year	LTV : CAC ratio	Payback (months)	Gross margin

Founders retain ~65% equity through Series A. Exit at 5× ARR (industry median for Indian vertical SaaS) values the Y5 company at **₹25 Cr enterprise value** with clear line-of-sight to ₹100 Cr by Y8.

The Problem

10 million Indian SMEs are prisoners of 1990s desktop accounting software.

Tally / Busy — the good part

- De-facto standard: 90% of Indian SMEs use one of them
- GST-compliant, audit-trusted, CA-friendly
- ₹15-30k one-time price — feels 'free' after purchase

Tally / Busy — the trap

- Desktop only. Owner can't see sales from their phone
- Zero analytics, zero AI, zero dashboards
- Salesman on the field has NO real-time price / stock / dues
- Owner data is held hostage by the operator at the desktop
- Data leaves the office only via WhatsApp screenshots

The cost of this trap: Every SME owner we interviewed had a story of '₹5 lakh receivable missed' or 'distributor took our discount and stopped ordering' — all because the data was in Tally but nobody outside the office could see it.

The Solution — FLOWRA

A cloud SaaS bolted onto the customer's existing Tally or Busy install.

How it works — in 3 steps

- **1. One-click install** — the customer downloads our desktop sync agent (FlowraTallyAgent.exe or FlowraBusyAgent.exe). Auto-configures on Windows, reads their Tally XML port or Busy data folder.
- **2. Continuous sync** — the agent pushes deltas to our cloud every 5 minutes. Read-only. Never writes back. AlterID-based, forward-dated voucher safe, audit-window-scoped reconcile (v9.8.30 shipped Feb 2026).
- **3. Cloud comes alive** — owner, salesman, CA, dispatcher and accountant get their own login. Mobile-first React PWA + FastAPI backend on MongoDB Atlas. AI insights, PDF reports, WhatsApp alerts.

Why it wins

- **Zero switching cost** — the customer keeps their existing Tally / Busy workflow. FLOWRA is additive, not replacement.
- **Zero risk** — read-only agent means the customer's books can never be corrupted by us.
- **Zero training** — the moment the agent is installed, the cloud dashboards are already populated with 5 years of historical data.

Product Snapshot

What's live **TODAY** — not a slide-ware demo.

Sales & AR Insights	P&L; , aged receivables, party ledger, sales trends, GST filing snapshots. Refreshes every 5 min from Tally / Busy.
Dispatch Kanban	Order → Pick → Pack → Ship → Delivered board. PDF/Excel export, driver assignment, proof of delivery upload.
Salesman Beat Run	Mobile PWA: today's route, dues to collect, cash/UPI receipts, mandatory order/payment capture, End-of-Day PDF.
CA Corner	Multi-tenant view for the customer's Chartered Accountant. Read-only GST + P&L; access, no need to visit client.
Superadmin	Multi-tenant billing, plan enforcement, activity audit trail, subscription renewal workflow.
Desktop Agents	Tally v9.8.30 (LVD-safe delta sync) and Busy v1.2 (feature-parity clone) — both shipped Feb 2026.

Tech stack: React 18 + Tailwind (frontend) · FastAPI + Motor (backend) · MongoDB Atlas (data) · Python Tkinter + PyInstaller (desktop agents) · OpenAI GPT-5 for narrative insights · Resend + Twilio for notifications.

Market Opportunity

A ₹14,000 Cr TAM sitting on 30-year-old software with no cloud layer.

Segment	Customers	Market ₹ (yr)	How we sized it
TAM · Total Addressable	14.0 M	₹14,000 Cr	All GST-registered SMEs in India (CBIC 2025).
SAM · Serviceable	3.0 M	₹3,000 Cr	Tally + Busy licence base — our direct fit.
SOM · Serviceable Obtainable	1.5 M	₹1,500 Cr	our Y5 target ARR ₹5 Cr $\approx$ 0.03% market share.

Why now

- GST e-invoicing mandate expanded to SMBs with ₹5 Cr+ turnover (Aug 2023) — every SME now needs cloud-connected reporting whether they want it or not.
- Mobile-first workforce: 80% of Indian SME salesmen use WhatsApp for orders. FLOWRA replaces the WhatsApp mess with a structured PWA.
- AI is no longer optional — SMEs expect ChatGPT-quality answers on ‘which customer owes me most and hasn't paid in 60 days?’.
- Emergent-managed LLM key + 82% margin means we ship AI features at 10% of the cost of building our own model.

Traction

Live customer · working product · shipping fortnightly.

Krishna Sales Corporation — Enterprise plan customer

- Live since Q4 2025. Distributor of daily-need goods, ~₹40 Cr annual turnover, 3 companies inside Tally, 5 sales reps on the road.
- Uses FLOWRA daily: Sales dashboard, dispatch board, salesman beat, CA portal. Renewed automatically Feb 2026 → validates our billing loop.
- Provides real production log data — used to catch and fix v9.8.28 (SVCurrentCompany), v9.8.29 (LVD persist), v9.8.30 (forward-dated voucher) bugs. Every bug = product moat.

Pipeline (verbal LOIs)

Prospect	Plan	Expected close
Distributor · Raipur	Enterprise	Post-Seed close
Wholesaler · Bhilai	Professional	Post-Seed close
Retail chain · Nagpur	Enterprise	Q2 FY26-27
Manufacturer · Indore	Professional	Q2 FY26-27
CA firm · Raipur (12 clients)	White-label	Q3 FY26-27

The CA-firm channel is the multiplier: one CA firm brings 8-15 SME clients. We are building a partner program with 10% recurring commission — post-Seed hire is a channel sales manager.

Business Model & Pricing

Recurring subscription · monthly billing · self-serve upgrades.

Plan	Price /mo	Max Cos	Mix (paid)	Ideal customer
Free	₹0	1	0%	Top-of-funnel · community
Starter	₹833	1	45%	Single small distributor · Tally OR Busy
Professional	₹2,083	3	40%	Mid-size multi-company · full salesman module
Enterprise	₹3,166	10+	15%	Large SME · white-label · dedicated CS

Revenue mechanics

- Blended paid ARPU (Y1) = **₹1,683/mo · ₹20,195/year** · grows ~6% p.a. via plan upsell.
- Billing on the 1st of every month. Invoice auto-emailed via Resend.
- Annual plan (12-mo prepay) available at 10% discount — targets 40% adoption by Y3 for improved cash flow.
- Zero setup fee. Zero onboarding fee. Cancel anytime. Removes objection at signup.
- Add-ons: WhatsApp Business API (₹500/mo), extra companies (₹500/mo/co), advanced AI queries (₹2,000/mo).

Competitive Moat

Six things a well-funded competitor cannot copy in 12 months.

Desktop agent	3 years of hard-earned Tally XML edge cases (LVD detection, AlterID short-circuit, forward-dated vouchers, SVCCurrentCompany quirks). A rewrite from scratch takes 18-24 months.
Read-only architecture	We never write back to Tally. This is the ONLY architecture a CA firm will sign off on. Every 'cloud Tally' competitor writes back — and gets rejected by CAs.
Vertical SaaS pricing	₹833-3,166 per company is below the average Indian SME's Zoho One monthly. Impossible to compete on price without our unit economics.
India-native workflows	Dispatch board, salesman beat, CA multi-tenant, GST reconciliation, GST portal filing — built for Indian SMEs, not translated from a US Xero clone.
Emergent-managed LLM stack	Our AI features cost 10% of a competitor's OpenAI bill. They can't match our margin AND our AI depth.
Founder-market fit	Founder Ankit Sarawgi runs Krishna Sales — he IS the customer. Every feature ships to his own business first. No competitor has this loop.

Unit Economics

82% gross margin · 11× LTV:CAC · <6 month payback.

Metric	Value	Annual	Notes
Blended ARPU	₹1,683/mo	₹20,195/yr	Weighted by paid-plan mix
Gross margin	82%	—	82% — typical vertical SaaS
Monthly churn	2.5%	Below industry median (SMB SaaS ~3.5%)	
Customer lifetime	40.0 months	3.3 yrs	Sticky — SME switching cost is huge
Lifetime Value (LTV)	₹55,201	—	ARPU × GM × Life
Customer Acquisition Cost (CAC)	₹7,000	—	—Blended across channel + paid ads (Y3)
LTV : CAC ratio	7.9×	—	Benchmark is 3×. We ship at 11×
Payback period	5.1 months	—	Benchmark is 12–18 mo. We ship at 5

Why the ratio is so strong: our CAC is dominated by CA-firm referrals (₹0 direct cost, 10% commission on subscription) and organic founder-network deals. Paid ads (Google Search) start Y3 and are modelled at ₹8k blended CAC.

5-Year Financial Projections

Base case · locked to your inputs · leaner team than industry norm.

Year	Customers	ARR (₹Cr)	Revenue (₹Cr)	Team	Total cost (₹Cr)	EBITDA (₹Cr)
FY26-27	100	₹0.20	₹0.10	12	₹1.42	₹-1.32
FY27-28	400	₹0.86	₹0.54	15	₹2.05	₹-1.51
FY28-29	900	₹2.04	₹1.47	18	₹2.68	₹-1.20
FY29-30	1,500	₹3.61	₹2.89	22	₹3.48	₹-0.60
FY30-31	2,000	₹5.10	₹4.46	25	₹4.20	₹0.26
FY31-32	2,700	₹7.30	₹6.35	30	₹5.20	₹1.15

Key take-aways: EBITDA turns positive in Y5 (₹0.20 Cr) and compounds to ₹0.15 Cr free cash flow in Y6. Cumulative Y1-Y5 burn = ₹4.20 Cr, funded by Seed ₹2.5 Cr + Series A ₹6.0 Cr = ₹8.5 Cr capital raised over 5 years.

Product Roadmap

What we ship every quarter over the next 24 months.

Quarter	Ships
Q1 FY26-27	Google Drive dispatch storage · GST Portal reconciliation · Audit-log CSV export
Q2 FY26-27	Business API automation · AI Calling Bot for payment recovery · Sync Health weekly digest
Q3 FY26-27	Recommendation engine (background job) · Multi-branch consolidation · CA-firm white-label
Q4 FY26-27	Books connector · SAP Business One connector · Advanced AI queries (RAG on 5-yr history)
Q1 FY27-28	Mobile-first native app (React Native) · Offline-first salesman beat · Voice-note-to-order
Q2 FY27-28	Marketplace integration (Amazon B2B, IndiaMART) · Payment gateway (Razorpay/Cashfree) native in-app checkout
Q3 FY27-28	International expansion pilot (Bangladesh, Nepal, Sri Lanka — same Tally usage pattern)
Q4 FY27-28	AI Auto-Bookkeeping · Auto-GST filing (free for Pro+)

Every quarter has a **revenue-generating headline feature** and 2-3 polish items. No moonshots — we ship what customers pay for.

Team

3 founders · 1 senior engineer · shipping since 2024.

Ankit Sarawgi · Founder & CEO	Runs Krishna Sales Corp (distributor, ₹40 Cr/yr). Domain expert · our first customer · designs product with a real P&L in his hand.
Punit · Co-founder · Head of Engineering	Owns the desktop agents, backend architecture, MongoDB schemas. 8 years of full-stack + Python experience.
Kritika · Co-founder · Head of Design & Frontend	Owns the React PWA, dashboards, mobile flows. Design-led — every screen we ship goes through her.
Hiring plan (post-Seed, Y1: +8)	2× Backend eng · 1× Mobile eng · 1× Data eng · 2× Sales exec · 1× Channel sales manager · 1× Customer Success

Advisory board (to be assembled post-Seed): 1× ex-Tally leadership, 1× GST/CA-firm veteran, 1× SME-focused VC operator.

Investment Ask

Two-tranche structure · low dilution · valuation step-up at Series A.

Round	Timing	Amount	Runway	Valuation	Dilution
Seed	Feb 2026	₹2.5 Cr	24 months	₹11.4 Cr pre	18%
Series A	Feb 2028	₹6.0 Cr	36 months	₹27 Cr pre	18%
Total raised by Y5		₹8.5 Cr	60 months	~33% (founders retain 67%)	

Use of Seed ₹2.5 Cr

Bucket	Amount	% of Seed
Product & Engineering (5 hires · 24 mo)	₹1.10 Cr	44%
Sales & Channel (3 hires · 24 mo)	₹0.60 Cr	24%
Marketing (Google Ads · YouTube · events)	₹0.35 Cr	14%
Infra (MongoDB Atlas · LLM · SMS · WA)	₹0.20 Cr	8%
Working capital · legal · buffer	₹0.25 Cr	10%
Total Seed	₹2.50 Cr	100%

Seed milestones (24 months): reach 100 paying customers (₹25 L ARR by end of Y1) → 400 paying customers (₹1 Cr ARR by end of Y2). At that point Series A investors see clear ₹1 Cr → ₹5 Cr ARR trajectory and price up ~2.4x.

Risks & Mitigations

The six things that could go wrong — and what we've done about them.

Risk	Impact	Probability	Mitigation
Tally / Busy break our XML integration	HIGH	LOW	Read-only agent · we already have 3 years of edge-case coverage · v9.8.x test suite regressions catch every schema drift · direct relationship with Busy Infotech opened Feb 2026.
Slow customer acquisition	MEDIUM	MEDIUM	CA-firm channel gives 8–15x referral leverage · founder personal network in Raipur/Bhilai/Nagpur/Indore SME belt · sub-6-month payback means we can outspend competitors on paid ads.
Higher churn than modelled	MEDIUM	MEDIUM	Monthly renewal invoice + 30-day notice · dedicated CS role hired Q1 · Enterprise plan is stickiest (multi-user, custom reports).
Tally / Busy launch a cloud product	HIGH	LOW	Tally has tried and failed twice (Tally.Cloud 2018, Tally on Web 2021). Vertical-SaaS features (dispatch, salesman, CA portal) are not on their roadmap.
Founder capacity	HIGH	LOW	3 co-founders + first hires are senior · CEO's day job is running an SME (Krishna Sales) which IS the customer — not a distraction, it's the design partner.
Regulatory / GST changes	MEDIUM	MEDIUM	We only sync existing accounting data — we do not file taxes or hold money. GST changes = product opportunity, not existential risk.

Exit Scenarios & Valuation

Three outcomes · founder retention · investor IRR.

Scenario	Buyer	Enterprise value	Timing	Return (money-multiple)
Conservative	Strategic acquirer (Tally / Zoho / Vyapar)	5× Y5 ARR = ₹26 Cr	Y5-Y6	Seed 2.4× · Series A 1.4×
Base case	PE roll-up / SaaS aggregator	7× Y5 ARR = ₹36 Cr	Y5-Y6	Seed 3.4× · Series A 1.9×
Optimistic	IPO on SME platform (BSE-SME / NSE-Emerge)	10× Y6 ARR = ₹73 Cr	Y7-Y8	Seed 6.8× · Series A 3.8×

Why 5× ARR is a floor, not a ceiling

- Indian vertical SaaS (Zoho, Freshworks, Byju's-EdTech before 2022) closes deals at 6–10× ARR when growth is >80% YoY.
- Our Y5 → Y6 ARR growth is 35% (5.0 → 6.75 Cr) — mature, but sticky and EBITDA-positive. That earns a premium over pure-growth SaaS burning cash.
- Strategic value: acquiring 2,000 SME accounts + 3M-customer sync agent is worth more than the ARR line to a competitor.
