FLOWRA · INSIGHTS

Business Proposal

Tally-native business intelligence for India's ₹3,450 Cr
SME analytics market. Two-year plan to ₹7.5 Cr ARR
and Series A.

Version 1.0
February 2026

For investor & partner review
Not for redistribution

FLOWRA Insights — Business Proposal

Version 1.0 · February 2026 · Confidential

1 · Executive Summary

FLOWRA Insights is a Tally-native business intelligence and operations SaaS purpose-built for Indian SMEs (₹5 Cr – ₹500 Cr turnover). It turns the data already trapped inside Tally ERP 9 / Tally Prime / Busy ERP into real-time dashboards, salesman tracking, dispatch terminals, customer health monitoring, GST-ready CA reports, and automated digests — without asking the customer to migrate off Tally.

Why this exists. India has ~22 lakh active Tally licenses and ~6 lakh Busy users. ~95% of these run their entire business on a single accountant's desktop. They have no dashboards, no mobile access for owners, no salesman visibility, no dispatch tracking, no customer-health alerts. The data is there — they just can't see it.

The product. A web app + Windows agent that: 1. Auto-syncs Tally/Busy data every 20 minutes (no schema migration) 2. Renders dashboards, BI, dispatch terminal, salesman beat plans 3. Provides AI-powered insights (GPT-5.2) 4. Sends WhatsApp/email digests of overdue payments, sales, stock alerts 5. Supports multi-company, multi-user, role-based access

The opportunity. Capturing **0.05%** of the Tally + Busy installed base at our ₹2,499 average ARPU = **₹42 Cr ARR**. Capturing **0.5%** = **₹420 Cr ARR**. The market is large enough that even modest execution funds a profitable business.

The ask (placeholder for investor/partner edition): ₹4 Cr seed at ₹16–20 Cr post-money to fund 24 months of go-to-market: GST/WhatsApp/sync hardening, a 12-person team, and customer acquisition to 2,000 paying tenants by month 24.

2 · The Problem

Indian SMEs run their books on Tally / Busy because their CA insists on it. But the moment the owner asks "how are we doing?", Tally answers with 500-line reports designed for an accountant, not for a decision-maker.

OWNER QUESTION	REALITY WITH TALLY ALONE
"How much is overdue from my top 10 customers?"	Run a 4-step report, export to Excel, manually sort
"Where is my salesman right now? What did he sell yesterday?"	Phone call. Maybe a WhatsApp screenshot.
"Which 20 SKUs are dead inventory?"	Custom report from CA, billed at ₹2,000
"Did the dispatch boy actually deliver invoice 5421?"	Phone call to godown
"How does this month compare to same month last year?"	Two reports, side by side, on paper

These are 5-second questions that take 30 minutes today. **FLOWRA reduces each to a tap.**

The problem is not that owners don't have data. It is that they cannot **see** it without phoning their CA. We are not replacing Tally — we are the dashboard Tally never built.

3 · The Product

3.1 What's already built (Feb 2026)

18 production-grade modules, all passing >120 regression tests:

- **Dashboard:** revenue, outstanding, overdue digest, plan distribution
- **Sales:** voucher analytics, customer-level revenue, FY-wise comparison
- **Inventory:** SKU dashboard, fuzzy search, dead-stock & ageing analysis
- **Inventory Analytics:** Pareto A/B/C/D classification, movement velocity
- **CRM:** customer outstanding with FIFO ageing, payment-behaviour scoring
- **Salesman:** targets, achievement %, beat plans, mobile-friendly view
- **Dispatch Terminal:** Kanban tracker (new → in-transit → delivered)
- **CA Corner:** P&L, Balance Sheet, Cash Flow with Tally parity
- **AI Insights:** GPT-5.2 expense narratives & forecasts
- **Insider Result:** BI charts, trend lines, predictive analytics
- **Sync History & Setup:** transparent agent telemetry
- **SuperAdmin Command Center:** customer health, billing, prospects, staff

3.2 The Tally Sync Agent (the moat)

A Windows tray application that: - Reads Tally via XML/TDL — zero footprint on customer's books - 20-minute auto-sync; first-run full sync, then incremental delta - Encrypted JWT auth, per-tenant data isolation - Auto-update channel (planned) so 1,000 agents update overnight - Single .exe, ~30 MB, runs on a 4 GB Tally workstation

This agent is the **product moat**. Competitors who try to copy us face 6+ months of XML-parsing edge cases (FY changes, voucher type variations, multi-company, ledger sign conventions). We've already eaten that cost.

3.3 Pricing (live)

PLAN	₹/ MONTH	₹/ ANNUAL	COMPANIES	EMPLOYEES	MODULES
Starter	₹999	₹9,990	1	2	Dashboard + Sales + Inventory + Sync + Setup
Professional	₹2,499	₹24,990	3	5	+ CRM + Analytics
Enterprise	₹3,799	₹37,990	10	20	+ Salesman + Dispatch + AI + Insider + CA

Average revenue per user (ARPU) blended: **₹2,499 / month**.

3.4 Roadmap (next 12 months)

QUARTER	THEME
Q1 (Mar–May 26)	Production hardening: Atlas + DigitalOcean + Sentry + CI/CD
Q2 (Jun–Aug 26)	GST Portal integration, WhatsApp BSP integration, Audit logs
Q3 (Sep–Nov 26)	Mobile app (React Native), advanced beat/salesman analytics
Q4 (Dec 26–Feb 27)	Multi-tenant white-label, partner program for CAs

4 · Target Market

4.1 Total Addressable Market (TAM) — India only

SEGMENT	TALLY SEATS	BUSY SEATS	FLOWRA-FIT %	ADDRESSABLE
Manufacturing SMEs (₹5–₹500 Cr)	~3.5 L	~1.0 L	70%	~3.2 L
Distribution / FMCG	~5.0 L	~1.5 L	80%	~5.2 L
Retail chains	~4.0 L	~1.0 L	40%	~2.0 L
Pharma / Chemicals	~1.0 L	~0.5 L	75%	~1.1 L
Total Indian addressable	~13.5 L	~4.0 L	—	~11.5 L

At ₹2,499 ARPU, **TAM = ₹3,450 Cr ARR**. Even capturing **0.05% = 575 tenants = ₹1.7 Cr ARR**. **0.5% = 5,750 tenants = ₹17 Cr ARR**.

4.2 Serviceable Addressable Market (SAM)

We narrow to **multi-location SMEs with field salesmen and distribution operations** — the segment where dashboards + dispatch + salesman tracking deliver clear ROI:

- ~3.5 L Tally + Busy users in distribution / FMCG / pharma
- Average 2 paid users per company
- **SAM ARR potential: ₹1,050 Cr**

4.3 Initial Beachhead (Year 1 focus)

Maharashtra + Gujarat + Karnataka distribution sector, 50–500 lakh turnover. Reasons: 1. Highest density of multi-salesman distribution businesses 2. Existing Tally/Busy adoption ~98% 3. Founder network access 4. WhatsApp-native sales culture (our digest channel)

Targeted 50,000 SMEs in this beachhead. Capturing **2% = 1,000 paying tenants = ₹3 Cr ARR by month 12**.

4.4 Customer Personas

1. The Owner (decision-maker, primary buyer) - 38–55, tier-2/3 city, knows Tally numbers vaguely - Uses WhatsApp + Excel daily - Wants: visibility, control, "everything on phone" - Pays: ₹2,500–₹4,000/month if it saves a CA call

2. The CA (gatekeeper / influencer) - Wants Tally parity (P&L, Balance Sheet, GSTR exports) - Hates anything that "writes to Tally" - We are read-only, so we're his ally, not threat - **Distribution channel:** CA partner programme (Year 2)

3. The Salesman (daily user, retention driver) - 22–40, mobile-first, never logs into desktops - Wants beat plans, target visibility, easy order-punching - We win retention if his daily life gets easier

4. The Dispatch Manager (operational user) - 28–45, godown floor, kanban-board mindset - Wants delivery tracking, invoice-change alerts

5 · Competitive Landscape

PLAYER	TYPE	WHERE THEY WIN	WHERE WE WIN
Zoho Books	Cloud accounting	All-in-one	Customer must migrate off Tally — non-starter for 95%
Vyapar / Marg	Tally alternative	Mobile billing	Same — replaces Tally
Khatabook / OkCredit	Khata / receivables	Free tier	No analytics, no inventory, no dispatch
Tally on Cloud (third-party hosting)	Lift-and-shift	Same UI as Tally	Still no dashboards, no mobile
Custom CA Excel reports	Manual	Cheap	Slow, error-prone, no real-time
Power BI / Tableau on Tally export	BI tools	Powerful	Needs IT team; ₹50k+ implementation

Our wedge: we don't ask the customer to change anything. The Tally agent reads silently in the background. Owner gets dashboards on his phone in 20 minutes. CA stays on Tally. Nobody is upset.

6 · Business Model

6.1 Revenue model

- **SaaS subscription**, monthly or annual (16% annual discount)
- 14-day free trial, no credit card required
- Trial-to-paid target: 18% (industry SaaS benchmark: 15-22%)
- Monthly churn target: <2% (annual: ~22%)

6.2 Unit economics (assumed steady state, year 2)

METRIC	VALUE
Blended ARPU	₹2,499 / month
Annual revenue per customer	₹29,988
Gross margin	78% (after Atlas, DO, BSP, Resend, Emergent LLM costs)
CAC (paid + organic blend)	₹6,500
Payback period	~3.5 months
LTV (5-year, 2% monthly churn)	₹85,000
LTV / CAC	13×

6.3 Pricing strategy notes

- ₹999 Starter is a **trojan horse**, not a profit centre — gets the agent installed; upgrades happen organically when the team grows
- ₹3,799 Enterprise is **anchored against ₹50k+ Excel/CA bills**, not against ₹999 Starter — the customer is comparing us to a CA's monthly retainer, not to other SaaS
- Annual prepay (16% discount) drives 30%+ of revenue and cuts churn 40%

7 · Go-to-Market Strategy

7.1 Channel mix (year 1)

CHANNEL	% OF NEW TENANTS	CAC	NOTES
Meta Ads (FB + IG lead forms)	40%	₹4,000	Geo-targeted to MH/GJ/KA, B2B intent
WhatsApp organic + referral	25%	₹500	Founder network + early-customer referrals
YouTube content (Tally tutorials)	15%	₹1,200	SEO long-tail; "how to see overdue in Tally"
CA partner programme	10%	₹3,500	Revenue-share; activates Year 2
Trade shows + Tally events	5%	₹8,000	High-trust but expensive
Outbound (cold call + WA)	5%	₹6,000	Reps closing inbound demos
Blended CAC	100%	₹3,200	Falls to ₹2,400 by month 18

7.2 Conversion funnel

```

10,000 Meta-ad impressions
  ↓ 4% CTR
400 lead-form submissions
  ↓ 50% qualification (right industry, right size)
200 demo calls booked
  ↓ 60% demo → trial activation
120 free trials
  ↓ 18% trial → paid
22 paying tenants
  
```

22 tenants × ₹2,499 = **₹54,978 / month new MRR per ₹50,000 ad spend** — 3.6-month payback at 78% gross margin.

7.3 Trial activation playbook

A trial that doesn't get the agent installed in 24 hours is lost. So:

1. Demo call (30 min) → screen-share-installs the agent live
2. Trial day 1: WhatsApp message "your dashboard is ready"
3. Trial day 3: digest with their actual overdue customers

4. Trial day 7: outreach — "shall I send the invoice?"

5. Trial day 12: final outreach + 14-day-grace offer

Expected: **18% activation** → **paid**, dropping to **8%** if step 1 is skipped.

8 · Manpower & Org Plan

8.1 Today (Month 0)

- 1 founder-engineer (full-stack)
- 0 sales / support / ops

8.2 Month 6 (post-seed, 200 paying tenants)

ROLE	COUNT	COST (INCL. TAX + BENEFITS)
Founder/CEO	1	₹0 (deferred)
Senior Full-stack Engineer	1	₹2.0 L/mo
Junior Full-stack Engineer	1	₹1.0 L/mo
QA + Tally-domain Engineer	1	₹0.9 L/mo
Sales / Demo Caller	2	₹0.7 L/mo each
Customer Success	1	₹0.6 L/mo
Content / Marketing	1 (part-time)	₹0.4 L/mo
Total monthly burn	8 FTE	~₹6.3 L/mo

8.3 Month 12 (1,000 tenants, ₹2.5 Cr ARR)

ROLE	COUNT	COST
Engineering (Sr FS, Jr FS, Mobile, QA, DevOps)	5	₹6.5 L/mo
Sales (Inside Sales lead, 4 callers)	5	₹3.5 L/mo
Customer Success (lead + 2 reps)	3	₹2.0 L/mo
Marketing / Content	2	₹1.5 L/mo
Operations / Finance / HR	1	₹1.0 L/mo
Total monthly burn	16 + 1 founder	~₹14.5 L/mo

8.4 Month 24 (2,500 tenants, ₹6.25 Cr ARR)

ROLE	COUNT	COST
Engineering (incl. Mobile + Data + DevOps)	10	₹14 L/mo
Sales (geo-pods MH/GJ/KA + Tier-2 expansion)	12	₹8 L/mo
Customer Success	6	₹4 L/mo
Marketing	4	₹3 L/mo
Operations / Finance / HR	3	₹2.5 L/mo
Total monthly burn	35 + founder	~₹31.5 L/mo

8.5 Org chart (Month 24)

9 · Technical Scalability

9.1 Current architecture (Feb 2026)

- React frontend (single SPA, ~2 MB gzipped)
- FastAPI backend (Python 3.11, async)
- MongoDB (single instance, will move to Atlas M10)
- Tally Sync Agent (Windows .exe, customer-side)
- Hosted on Emergent for development; production target = DO + Atlas

9.2 Scale milestones

TENANTS	ARCHITECTURE STANCE	BOTTLENECK
100	Single droplet + Atlas M10, no caching	None — over-provisioned
500	Add Redis cache layer for dashboards	DB read traffic
2,000	Atlas M20 + read replica, CDN for static assets	DB write traffic on sync ingest
5,000	Backend horizontally scaled (3 nodes), queue-based sync ingest (BullMQ/Celery), per-tenant DB sharding	Sync ingest throughput
10,000	Per-region (MH/GJ/KA) data residency clusters, multi-master DB	Compliance + latency

9.3 Sync ingest throughput

The hottest path is the agent → backend sync. At 2,000 tenants × 20-min interval × 50,000 vouchers per full sync, peak is ~150 inserts/second across the cluster — well within MongoDB's headroom. Beyond 5,000 tenants we move agent uploads to a queue (Cloudflare R2 raw XML drop → async worker) so the API stays responsive.

9.4 Cost-per-tenant at scale

TENANTS	INFRA ₹/MO	₹ PER TENANT PER MONTH
100	13,000	₹130
500	35,000	₹70
2,000	95,000	₹47
10,000	4,50,000	₹45

Hosting cost asymptotes near ~₹45/tenant. Gross margin therefore **improves with scale**.

9.5 Reliability targets

- **99.5%** uptime year 1 (≈3.5 hours downtime/month allowed)
- **99.9%** by year 2 (≈45 min/month)
- RPO (Recovery Point Objective): 1 hour (Atlas continuous backup)
- RTO (Recovery Time Objective): 30 minutes (Docker rebuild + restore)

10 · Financial Projections (24-month)

10.1 Tenant growth

MONTH	NEW TENANTS	CUMULATIVE PAYING	MONTHLY CHURN	MRR
1	15	15	0%	₹37,485
3	45	95	1%	₹2,37,405
6	90	280	1.5%	₹6,99,720
9	130	580	2%	₹14,49,420
12	175	1,000	2%	₹24,99,000
18	220	1,750	2%	₹43,73,250
24	250	2,500	2%	₹62,47,500

10.2 Revenue summary

PERIOD	MRR	ARR	CUMULATIVE REVENUE
End of Year 1	₹25 L	₹3.0 Cr	₹1.5 Cr
End of Year 2	₹62.5 L	₹7.5 Cr	₹5.5 Cr

10.3 P&L (₹ in Lakhs)

LINE	YEAR 1	YEAR 2
Revenue	150	550
Hosting infra	(10)	(35)
BSP / SMS / WhatsApp	(8)	(25)
Payment gateway (2%)	(3)	(11)
Gross profit	129	479
Salaries & contractors	(110)	(330)
Marketing & sales spend	(120)	(200)
Office / legal / misc	(20)	(40)
EBITDA	(121)	(91)
Cumulative loss	(121)	(212)

Path to EBITDA-positive: **month 30** at current trajectory. Faster if margin improvements (annual prepay mix, partner channel) hit faster.

10.4 Funding required

ROUND	QUANTUM	USE
Seed (now)	₹4 Cr	24 months runway, hire to 16, build to ₹7.5 Cr ARR
Series A (month 24)	₹15-20 Cr	Mobile app, partner channel, 5x sales, expand to N. India

10.5 Sensitivity analysis

SCENARIO	M24 TENANTS	M24 ARR
Bear: 0.6× plan execution	1,500	₹4.5 Cr
Base: as plan	2,500	₹7.5 Cr
Bull: 1.4× (CA partner unlocks)	3,500	₹10.5 Cr

11 · Two-Year Plan (Quarter by Quarter)

Year 1

Q1 (Mar–May 26) — *Foundation* - Migrate to MongoDB Atlas + DigitalOcean - Set up CI/CD, Sentry, BetterStack (per Production Playbook) - Hire: 1 Senior FS engineer, 1 demo caller - Target: 50 paying tenants

Q2 (Jun–Aug 26) — *GTM ignition* - Launch GST Portal integration (CA stickiness) - Launch WhatsApp digest (AiSensy or direct Meta Cloud API) - Hire: QA, second sales caller, Customer Success - Target: 250 paying tenants

Q3 (Sep–Nov 26) — *Salesman product wedge* - Mobile-responsive overhaul of Salesman + Dispatch - Beat plan optimiser - Hire: Junior FS, marketing/content - Target: 550 paying tenants

Q4 (Dec 26–Feb 27) — *Year 1 close* - React Native mobile app (alpha) - Audit log CSV export, advanced filters - CA partner programme launch (closed beta) - Target: 1,000 paying tenants, ₹3 Cr ARR

Year 2

Q5 (Mar–May 27) — *Mobile + partner* - Mobile app GA (Android first, iOS later) - CA partner programme open - Code-signing certificate for Tally agent (drops install friction 30%) - Hire: Mobile lead, DevOps, 2 sales reps - Target: 1,400 tenants

Q6 (Jun–Aug 27) — *Geographic expansion* - Push to N. India (Delhi, UP, Punjab) + Tamil Nadu - Localised marketing (Hindi, Tamil) - Target: 1,800 tenants

Q7 (Sep–Nov 27) — *Enterprise tier* - Multi-company group consolidations - Custom SSO, API access, white-label option - Target: 2,200 tenants + first ₹10 Cr ACV enterprise customer

Q8 (Dec 27–Feb 28) — *Series A close, scale-out* - Close ₹15-20 Cr Series A - Hire-out the org chart in Section 8.4 - Target: 2,500 tenants, ₹7.5 Cr ARR, EBITDA-near-breakeven

12 · Risks & Mitigations

RISK	SEVERITY	LIKELIHOOD	MITIGATION
Tally Solutions launches a competing dashboard	High	Medium	We own the read-pipeline + dispatch + salesman product surface they don't care about (Tally focuses on accounting)
Customer's Tally version too old to read	Med	Med	Already supports Tally ERP 9 + Prime; agent gracefully degrades
Meta WhatsApp policy tightens	Med	Med	Diversify into SMS + email digests; user-initiated WA only
MongoDB Atlas cost runaway	Low	Low	Per-tenant cost analysis monthly; sharding playbook ready at 5k tenants
Founder bus factor	High	Low	Hire technical co-lead by Month 6; document everything (already doing — see Production Playbook)
CAC inflation (Meta ad cost)	Med	High	Diversify to YouTube + organic + CA partner; reduce % via referral
GST policy change breaks sync	Med	Med	We're a read-only consumer; we follow Tally's adaptation, not the GSTN's
Customer data breach	Catastrophic	Low	Atlas encryption-at-rest + TLS-everywhere + pen-test in Month 4; cyber-liability insurance

13 · Why Now (the macro tailwind)

1. **GST + e-invoicing mandate** is forcing every ₹5 Cr+ business to keep accurate Tally books. Quality of source data is rising.
2. **DPDP Act** (Indian data privacy law) is making lift-and-shift cloud migrations harder — incumbents (Zoho/Marg) lose advantage. We are data-residency-friendly: customer's books stay in India.
3. **WhatsApp Business API** maturing in India enables zero-friction notifications — was clunky 18 months ago.
4. **Mobile-first owners** in tier-2/3 cities — ~70% of SME owners now prefer phone over desktop for daily insights.
5. **Tally Solutions is moving slowly.** Their cloud play "Tally on AWS" launched in 2023 but offers no analytics or mobile UX — leaving a wedge for us.

The window for this product is **24–36 months**. After that, either we own the segment or someone else does.

14 · Why Us (Team & Track Record)

[Founder bio placeholder — to be filled with founder's accountancy/Tally domain experience, prior ventures, technical credentials, and any early customers / LOIs.]

What we have already shipped (Feb 2026): - 18 production modules, ~120 pytest regression tests, end-to-end - Tally Sync Agent v9.8.9 with Day-Book fallback, deployed to early users - Multi-tenant infrastructure with role-based access (admin / dispatch / salesman / employee / super_admin / flowra_staff) - Comprehensive 18-page Production Operations Playbook (this document's sibling)

What we are building next: - Code-signed Windows installer - WhatsApp BSP integration - Mobile app (React Native) - CA partner programme

15 · The Ask

₹4 Crore Seed at ₹16-20 Cr post-money

USE OF FUNDS	AMOUNT	%
Engineering hires (5 FTE × 24 months)	₹1.6 Cr	40%
Sales + CS hires (8 FTE × 24 months)	₹1.0 Cr	25%
Marketing & customer acquisition	₹0.8 Cr	20%
Infra + tooling + compliance	₹0.2 Cr	5%
Working capital buffer	₹0.4 Cr	10%
Total	₹4 Cr	100%

Milestones funded: - Month 12: 1,000 paying tenants, ₹3 Cr ARR - Month 24: 2,500 paying tenants, ₹7.5 Cr ARR, Series A ready - Default-alive by Month 30

16 · Closing

FLOWRA Insights is not a moonshot. It is a **execution play** in a market where the customer base, the demand, the price-elasticity, and the distribution channels are all known and proven. The risk is not "will people pay?" — they already are. The risk is "can we ship and sell fast enough to win the segment before someone else does?"

We have the product. We have the playbook. We need the team and the runway.
