

WHAT'S NEW

FLOWRA Insights — Latest Features

Everything we've shipped through May 2026. Each update builds toward FLOWRA's promise: software that runs your business, quietly.

Beat Run Today — Field Coverage Tracking

NEW

Salesmen now have a one-tap daily beat sheet auto-derived from their plan. They tap a customer to mark visited, log unplanned (NEW) visits, and see real-time coverage %. Day-end auto-locks past dates so the audit trail stays clean. Admins audit any salesman's beat run from the useradmin Salesman → Beat Runs tab.

- Auto-built from each salesman's beat plan filtered by today's day-of-week (IST)
- Tap-to-toggle visited check-ins with IST timestamp
- NEW chip for unplanned visits until that customer appears in synced Tally data
- Read-only Beat History — past runs locked, click any row for detail view
- Server-side day-end lock — the API itself rejects stale run_date params
- Single-salesman-per-customer enforcement — prevents cross-mapping conflicts

Inventory A/B/C/D Categorisation

NEW

The old free-text Category field is replaced with proper Pareto A/B/C/D tiers. Tag manually with one click, or run Auto-ABC to apply the 80-15-4-1 distribution across the FY revenue. Filters and a new Category Sales Analytics tab let you slice the entire catalog by tier with drill-downs.

- Manual: one-click A/B/C/D pill on every row
- Bulk: Auto-ABC button runs Pareto 80-15-4-1 on FY revenue
- Filter: dropdown to slice by A/B/C/D/Untagged
- Preserved across re-syncs — sync.py snapshots assignments before delete-and-reinsert
- Standard Sale Price column (Tally STDPRICE) added to Inventory table
- Category Sales Analytics tab — top customers, qty, revenue, frequency per item, CSV export per category

CA Corner — 100% Tally Parity

ENHANCED

Balance Sheet and Profit & Loss now match Tally exactly. Built directly from synced ledgers with proper sign convention, auto-balanced via P&L; A/c residual. Validated against real customer FY26-27 exports — Sales, Purchases, Indirect Income, Direct Expense match to the rupee.

- Balance Sheet derived from all_ledgers + customers + creditors with correct asset/liability sign flips
- P&L; Method A — sums all_ledgers.closing_balance by parent_group for current FY (matches Tally exactly)
- Heuristic catch-all for user-defined sub-groups (Salary Accounts, Local Thela Gaadi, Wages, Rent, Travel, etc.)
- Automatic notices when Stock-in-Hand or Sundry Creditors aren't yet synced
- Tally Verified ✓ green badge in CRM Outstanding when computed OS reconciles to Tally master

Dispatch Employee Mirror View

ENHANCED

Dispatch employees now see the SAME admin Dispatch Terminal — Kanban board, online orders, pending billing, porters, transporters, date selector, create-cards — with only the Employees tab hidden. Logout no longer flashes a 'Feature Not Activated' toast (root-cause fix in PageRenderer).

- Full feature parity with admin view (only Employees tab hidden)
- Online Order tab cards now clickable → detail modal with line items, part numbers, notes
- Tenant-wide visibility fix — /api/dispatch/employees now scopes by tenant, not company
- Logout flash bug fixed — PageRenderer returns null when token cleared

Backups & Tenant Data Export

NEW

A two-tier data-protection layer. SuperAdmin can run on-demand or scheduled MongoDB dumps and download them anytime. Every tenant admin can export their entire dataset as a ZIP for DPDP Act 2023 compliance — your data, your rights.

- SuperAdmin → Backups tab: Run Now, list, download, delete
- Daily 02:00 IST cron retains last 30 backups (gzipped mongodump archives)
- Tenant admin → user menu → Export Your Data: ZIP with one JSON per collection + manifest
- Strict tenant isolation — cross-tenant data, password hashes, system audit logs are never included
- Every export and backup logged to the audit trail

Salesman Dashboard & Performance

NEW

Salesmen now land on a personal dashboard showing Achieved, Expected YTD, Monthly Target and Achievement %, with customer-wise drill-downs and top items sold. Activity feed scoped to own audit logs only. Achievement % bug fixed — now compares against YTD-prorated target, not full annual.

- KPI cards: Achieved, Expected YTD, Monthly Target, Achievement % (FY-aware)
- Customer-wise breakdown drill-down + top items sold
- New Order: catalog search matches item_name OR part_number; part numbers in cart and order detail
- Activity feed scoped to own logs (admin still sees everything for the tenant)
- Beat Plans tab in admin Salesman page — visualise 6-day weekly grid + editable rows

Tally Sync Agent v9.6.0

ENHANCED

Captures STANDARDPRICE per stock item so the Salesman catalog and Inventory table show the right Tally master price. Falls back to closing rate until first re-sync. Earlier v9.1/v9.5 fixes for JV direction, creditor filtering, and signed P&L; summary all rolled in.

- STANDARDPRICE / STDPRICE captured per stock item → standard_price field
- Per-line DR/CR direction in ledger_entries (ISDEEMEDPOSITIVE + signed AMOUNT fallback)
- Creditor sub-group string-match (creditor/supplier/vendor) for user-defined groups
- Salary, Wages, Rent, Travel, Commission, Advertisement auto-mapped to Indirect Expenses
- Re-served at /flowra-desktop-agent.py — re-run Full Sync to refresh master prices

Dispatch Terminal

NEW

A complete warehouse-floor companion. Convert approved orders into dispatch cards, track them through a Kanban swim-lane (Pending → Packed → Loaded → Out → Delivered), settle transporter & porter charges, and generate a one-click Close-of-Day PDF summarising everything sent out today.

- Kanban swim-lane board with drag-and-drop status changes
- Mobile-responsive — works on warehouse-floor tablets and phones
- Document upload per dispatch (LR copy, packing list, photo proof)
- Transporter and Porter settlement screens with running balance
- Pending Billing tab — verify which approved orders haven't been billed in Tally yet
- Close-of-Day PDF report, downloadable / WhatsApp-shareable
- Online Orders tab merges dispatch with e-commerce orders

Salesman Order System

NEW

A mobile-first order collection app for field salesmen. Real-time stock view, customer-isolated catalog, and an admin approval workflow. Approved orders flow into the Dispatch Terminal for fulfillment.

- Salesman role unified inside Profile → Employees (no separate setup)
- Customer mapping per salesman — they only see their assigned customers
- Real-time inventory visibility while drafting an order
- Order lifecycle: Pending → Approved / Rejected / Hold → Billed
- Pending Billing verification against Tally invoice numbers
- Mobile-first UI — built for phones first, desktop second
- Customer targets & follow-ups in one place

CA Corner — Balance Sheet & P&L; Drill-Down

NEW

A dedicated workspace for Chartered Accountants. Cash Flow (Tally indirect method), monthly/annual P&L;, Balance Sheet grouped by parent group with expandable ledger drill-down, and AI-powered expense insights.

- Cash Flow statement (Operating, Investing, Financing) — Tally indirect method

- P&L; Report with monthly + annual views and ledger drill-down
- Balance Sheet — Assets vs Liabilities + Capital, expandable per ledger
- Income/Expense toggle with per-ledger percentage bars
- AI-powered expense analysis — GPT-5.2 suggests cost-reduction insights
- Powered by `all\_ledgers`, `profit\_loss`, `bank\_cash\_ledgers` (synced by Desktop Agent)

Busy Accounting Sync Agent

NEW

FLOWRA now supports Busy Accounting Software in addition to Tally. A new lightweight Windows agent reads Busy `.bds` (MS Access) files, syncs all voucher types, and uses cursor-based row streaming so it never spikes RAM.

- Light-themed Tkinter GUI — no command prompt
- Sub-100 MB RAM ceiling even on 100K+ voucher datasets
- Auto-discovers FYs from `db{year}.bds` filenames
- Multi-company support, full + quick-sales sync modes
- Live sync-progress events mirror the Tally agent (visible in web UI)
- Tally v9 agent + Busy v1 agent both maintained in parallel

Multi-Company Auto-Discovery

ENHANCED

Sync more than one company without configuring each one. The desktop agent reports every Tally/Busy company found, FLOWRA registers a UUID mapping, and the web UI shows a clean Company Switcher in the navbar.

- Plan-based company limits (Starter 1 / Professional 3 / Enterprise unlimited)
- Last-sync timestamp and agent badge per company in switcher
- Per-company subscription expiry & sync gating
- Branch-ledger toggle in CRM Outstanding (include/exclude branch transfers)

Agent Version Badges

NEW

Every synced company shows a badge (blue Tally vX or amber Busy vX) so admins immediately see which agent is responsible for that company's data — useful when you run mixed Tally/Busy operations.

Refreshed Onboarding Tour

ENHANCED

A 19-step interactive tour that now covers every new menu (Salesman, Dispatch, CA Corner, Sync History, Activity), auto-skips any feature your plan doesn't include, and can be replayed anytime from the user menu.

CRM Outstanding — FY-aware reverse-computation

FIX

The historic FY opening-balance calculation is now correct across all financial years. We reverse-compute earlier-FY opening balances from Tally's current-FY closing, eliminating the double-counting bugs from earlier versions.

Customer Targets & Follow-ups

ENHANCED

Set monthly targets per customer, add follow-up notes with reminders, and export the entire CRM as Excel.

Insider Result + AI Reports

AI

GPT-5.2 powered narrative reports — slow movers, customer-shift anomalies, payment-behaviour deviation, all written in plain English. Insider Result shows the most pressing patterns as quick cards on the dashboard.

Brand Suite Foundation

FOUNDATION

The FLOWRA brand kit (`@flowra/brand-kit`) and the parent suite landing at flowralive.in have been built — preparing the path for FLOWRA Tasks and FLOWRA Loyalty as independent companion products.

How to enable any of these for your tenant

Most of these features are available out-of-the-box on Professional and Enterprise plans. If a tile isn't showing up in your menu, it's a feature-gating choice — write to hello@flowralive.in with your tenant ID and we'll enable it.
